The intensity of protein metabolism in the brain of animals depends on the number and frequency of repeated convulsive attacks, induced by electricity: if attacks are frequently repeated without leading to deep exhaustion the metabolic processes are carried out more intensively than under normal circumstances and under conditions of a few repetitions only, taking into account at the same time the condition following convulsive attacks, which is characterized by an essentially (Biological Sciences--Pathology, TT, v. 9, no. 11) (over)
